Implementation: The provider has installed certified EHR technology and has started using it in clinical practice. Implementation activities would include staff training in the certified EHR technology, the data entry of their patients’ demographic and administrative data into the EHR, or establishing data exchange agreements and relationships between the provider’s certified EHR technology and other providers, such as laboratories, pharmacies, or HIEs.

Upgrade: The expansion of the functionality of the certified EHR technology, such as the migrating from a non-certified to certified EHR technology, addition of clinical decision support, e-prescribing functionality, CPOE or other enhancements that facilitate the meaningful use of certified EHR technology.
