Foreword

Personal Health Choices is a joint publication of the Center for Health Information Analysis (CHIA) and the Department of Health and Human Services, Nevada State Health Division, Bureau of Health Statistics, Planning and Emergency Response. This report presents specialty care hospital inpatient discharge billing records data for 11 common medical and surgical diagnoses by MS-DRG (Medicare Severity Diagnosis-Related Groups) as reported by 22 of Nevada's non-acute care (specialty) hospitals that discharged patients within the period of 2009 to 2013.

These data are available through the standard Uniform Billing form, which is utilized by hospitals to bill for their hospital charges. These data include patients who were admitted to a hospital as an inpatient, but do not include patients who were treated and released from the emergency room. It includes information about patients discharged from non-federal hospitals in Nevada. These data identify billed charges, not the actual payments received by the hospital.

The data were compiled by CHIA using information from inpatient hospital billing records. This information was gathered and analyzed as part of a contractual agreement between the Department of Health and Human Services and the University under the authority granted in Section 439B of the Nevada Revised Statutes. CHIA audits the data and requests corrections when errors are found. It is not possible to detect all errors. CHIA is not responsible for errors that cannot be found by an audit.

Introduction

This twenty-sixth edition, Book 2 of Personal Health Choices compares 22 of Nevada's specialty care hospitals with respect to 11 common medical diagnoses and surgical procedures, defined by Medicare Severity Diagnosis Related Groups (MS-DRGs: see below). The definitions to all DRGs can be found on the narrative page for each DRG. Each diagnosis and procedure in this publication may be based on an individual DRG or multiple related DRGs.

THE DIAGNOSIS RELATED GROUP (DRG) SYSTEM

Diagnosis Related Group (DRG), is a classification system that is based on principal and secondary disease diagnoses, medical and surgical procedures, complications, comorbidities (coexisting conditions), age and discharge status. The DRG system is complex in its construction, and is based upon documentation in the patient's medical record. DRGs are divided into 25 exclusive categories referred to as major diagnostic categories (MDCs). DRGs enable hospitals to recover the appropriate reimbursement for services rendered, evaluate the quality of care and assist in evaluating utilization of services. The DRGs classify patients with similar utilization of hospital resources and length of stay patterns. Each DRG represents the average resources needed to treat patients grouped to that DRG compared to the national average of resources to treat all Medicare patients. Hospitals are reimbursed at a flat rate based on the theory that patients with similar illnesses undergoing similar procedures will require similar care. The primary outcome of the DRG system is the more efficiently a hospital delivers care, the greater its operating margin will be.

INFORMATION LEVEL

Personal Health Choices is intended as a source of information regarding the billed charges of hospitals in Nevada, and should not be construed as a definitive guide for selecting a hospital in order to receive inpatient medical care. The financial information in this report is based on billed charges rather than the amount actually collected on discharged patients per DRG. Billed charges and collected charges can differ significantly. This report provides the reader information about one component of healthcare pricing - inpatient hospitalization. Hospital outpatient services as well as professional physician and other non-hospital inpatient ancillary healthcare services are not covered in this report.

CREDIT DUE: Google Web was extensively used to obtain definitions for medical terms. This can be accessed by typing, 'define: term' in the Google search box. Also <http://medical-dictionary.thefreedictionary.com/>

Factors

The information provided in this report is formatted so as to present narrative and tabular data on the first page and detailed tabular data on the second. This report covers a five-year trend line for DRG-related data. DRGs are sometimes broken down by age factors and/or presence of comorbidity. Comorbidity or comorbid conditions are defined as two or more coexisting medical conditions.

The first page of each selected DRG presents gender and age breakdowns of the overall hospital inpatient population, factored by the total number of discharges, average length of hospital stay and average billed charges. The age categories consist of 0-17, 18-35, 36-49, 50-64, and 65+. These age categories were selected to best illustrate the impact of the disease diagnoses and medical and surgical procedures on the populations affected. The narrative information on the first page for each DRG is based on the available data and may contain information on specific diagnoses and surgical procedures involved in the treatment of the patient. These diagnoses and procedures may not always be directly related to the primary ailment. The second page examines specific hospitals in Clark, Washoe and the Rural counties with regard to total discharges, average length of stays, and average billed charges.

It should be noted that, when comparing hospitals to average length of stay and billed charges, information based on small numbers of cases cannot provide a reliable statistical base upon which information can reflect a given hospital's experience. Further, physician charges (including those of surgeons) are normally separate from hospital charges, except in rural areas where some physician services -- such as radiology, anesthesia, and laboratory tests -- may be included in the hospital charges.

The Center for Health Information Analysis (CHIA) receives patient bill records directly from all the hospitals. These data are audited and if errors are found a resend is requested. The audit includes missing or out of range fields as well as statistical mixes of fields such as payer, gender, and race. Although CHIA does everything it can to validate the data, there are some types of errors that cannot be audited. The hospitals are typically very good at creating data and coding so these errors are a rarity.

ANOMALIES: For DRGs 207-208, for year 2011 and hospital Progressive, there is one case with over a million dollar charge. This is most likely an error in the data that was sent to CHIA.

GENERAL ACUTE CARE HOSPITALS

Hospital Name	Address	Phone	Beds	County
Carson Tahoe Continuing Care Hospital (LTAC)	775 Fleischmann Way, Carson City, NV 89703	(775) 445-7786	29	Carson
Complex Care Hospital at Tenaya	2500 N. Tenaya Way, Las Vegas, NV 89128	(702) 562-2021	70	Clark

Respiratory Diagnosis With Ventilator (207-208)

Diagnoses: that frequently accompanied Respiratory Diagnosis With Ventilator were: 1) Attention to gastrostomy (V551), 2) Attention to tracheostomy (V550), 3) Pneumonia, organism unspecified (486), 4) Encephalopathy, unspecified (34830), 5) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as uncontrolled (25000), 6) Anemia, unspecified (2859), 7) Acute kidney failure, unspecified (5849), 8) Urinary tract infection, site not specified (5990).

Definitions: **Gastrostomy:** A surgical opening into the stomach. **Tracheostomy:** Among the oldest described surgical procedure, consists of making an incision on the anterior aspect of the neck and opening a direct airway through an incision in the trachea. **Pneumonia:** An infection of the lung that can be caused by any class of organism known to cause human infections. **Encephalopathy:** Disorder or disease of the brain. **Anemia:** A decrease in number of red blood cells or less than the normal quantity of hemoglobin in the blood. **Acute kidney failure:** Occurs when illness, infection, or injury damages the kidneys. Temporarily, the kidneys cannot adequately remove fluids and wastes from the body or maintain the proper level of certain kidney-regulated chemicals in the bloodstream. **Urinary tract infection:** An infection of one or more structures in the urinary tract. Gram-negative bacteria cause most of these infections.

Osteomyelitis (539-541)

Diagnoses: that frequently accompanied Osteomyelitis were: 1) Pressure ulcer, lower back (70703), 2) Pressure ulcer, stage IV (70724), 3) Anemia, unspecified (2859), 4) Unspecified essential hypertension (4019), 5) Urinary tract infection, site not specified (5990), 6) Unspecified osteomyelitis, ankle and foot (73027), 7) Atrial fibrillation (42731).

Definitions: **Pressure ulcer:** An area of skin that breaks down when something keeps rubbing or pressing against the skin. **Pressure ulcer, stage IV:** The pressure ulcer has become so deep that there is damage to the muscle and bone, and sometimes to tendons and joints. **Anemia:** A decrease in number of red blood cells or less than the normal quantity of hemoglobin in the blood. **Hypertension:** Elevated blood pressure persistently exceeding 140/90. Essential hypertension, the most common kind, has no single identifiable cause. **Urinary tract infection:** An infection of one or more structures in the urinary tract. Gram-negative bacteria cause most of these infections. **Osteomyelitis:** An infection of the bone or bone marrow. **Atrial fibrillation:** Fibrillation of the muscles of the atria of the heart.

Diabetes (637-639)

Diagnoses: that frequently accompanied Diabetes were: 1) Unspecified osteomyelitis, ankle and foot (73027), 2) Ulcer of other part of foot (70715), 3) Unspecified essential hypertension (4019), 4) Peripheral vascular disease, unspecified (4439), 5) Other and unspecified hyperlipidemia (2724), 6) Polyneuropathy in diabetes (3572), 7) Hypertensive chronic kidney disease, unspecified, with chronic kidney disease stage I through stage IV, or unspecified (40390).

Definitions: Osteomyelitis: An infection of the bone or bone marrow. **Ulcer:** Wounds that develop on the skin, mucous membranes, or eye. Although they have many causes, they are marked by loss of integrity of the area, secondary infection of the site by bacteria, fungus, or virus, generalized weakness of the patient, and delayed healing.

Hypertension: Elevated blood pressure persistently exceeding 140/90. Essential hypertension, the most common kind, has no single identifiable cause. **Peripheral vascular disease:** The obstruction of large arteries not within the coronary, aortic arch vasculature, or brain. **Hyperlipidemia:** The condition of abnormally elevated levels of any or all lipids and/or lipoproteins in the blood. **Polyneuropathy:** A neurological disorder that occurs when many peripheral nerves throughout the body malfunction simultaneously.

Hypertensive chronic kidney disease: A progressive loss in renal function over a period of months or years.

Renal Failure (682-684)

Diagnoses: that frequently accompanied Renal Failure were: 1) Debility, unspecified (7993), 2) Hypertensive chronic kidney disease, unspecified, with chronic kidney disease stage V or end stage renal disease (40391), 3) Pneumonia, organism unspecified (486), 4) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as controlled (25000), 5) Urinary tract infection, stie not specified (5990), 6) Acute kidney failure with lesion of tubular necrosis (5845), 7) Hypertensive chronic kidney disease, unspecified, with chronic kidney disease stage I through stage IV, or unspecified (40390), 8) Congestive heart failure, unspecified (4280), 9) Anemia in chronic kidney disease (28521).

Definitions: **Debility:** The state of being weak or feeble; infirmity. **Chronic kidney disease stage V or end stage renal disease:** A progressive loss in renal function over a period of months or years. Stage 5 being a severe illness with poor life expectancy if untreated. **Pneumonia:** An infection of the lung that can be caused by any class of organism known to cause human infections. **Urinary tract infection:** An infection of one or more structures in the urinary tract. Gram-negative bacteria cause most of these infections. **Acute kidney failure:** Occurs when illness, infection, or injury damages the kidneys. Temporarily, the kidneys cannot adequately remove fluids and wastes from the body or maintain the proper level of certain kidney-regulated chemicals in the bloodstream. **Lesion:** Any abnormal tissue found on in or in an organism, usually damaged by disease or trauma. **Tubular necrosis:** A medical condition involving the death of tubular cells that form the tubule that transports urine to the ureters while reabsorbing 99% of the water. **Congestive heart failure:** Inability of the heart to supply sufficient blood flow to meet the body's needs. **Anemia:** A decrease in number of red blood cells or less than the normal quantity of hemoglobin in the blood.

Septicemia Or Severe Sepsis (870-872)

Diagnoses: that frequently accompanied Septicemia Or Severe Sepsis were: 1) Sepsis (99591), 2) Unspecified septicemia (389), 3) Pneumonia, organism unspecified (486), 4) Urinary tract infection, site not specified (5990), 5) Acute kidney failure, unspecified (5849), 6) Acute respiratory failure (51881), 7) End stage renal disease (5856), 8) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as controlled (25000), 9) Atrial fibrillation (42731).

Definitions: **Sepsis:** A bacterial infection in the bloodstream or body tissues. **Septicemia:** Blood poisoning; systemic disease associated with the presence and persistence of pathogenic microorganisms or their toxins in the blood. **Pneumonia:** An infection of the lung that can be caused by any class of organism known to cause human infections. **Urinary tract infection:** An infection of one or more structures in the urinary tract. Gram-negative bacteria cause most of these infections. **Acute kidney failure:** Occurs when illness, infection, or injury damages the kidneys. Temporarily, the kidneys cannot adequately remove fluids and wastes from the body or maintain the proper level of certain kidney-regulated chemicals in the bloodstream. **Acute respiratory failure:** A sudden inability of the lungs to maintain normal respiratory function. The condition may be caused by an obstruction in the airways or by failure of the lungs to exchange gases in the alveoli. **End stage renal disease:** A progressive loss in renal (kidney) function over a period of months or years. **Atrial fibrillation:** Fibrillation of the muscles of the atria of the heart.

Psychoses (885)

Diagnoses: that frequently accompanied Psychoses were: 1) Insomnia, unspecified (78052), 2) Unspecified psychosis (2989), 3) Substance abuse in family (V6142), 4) History of physical abuse (V1541), 5) Tobacco use disorder (3051), 6) Posttraumatic stress disorder (30981), 7) Major depressive affective disorder, single episode, unspecified (29620).

Definitions: **Insomnia:** Chronic inability to fall asleep or remain asleep for an adequate length of time. **Psychosis:** A severe mental disorder, with or without organic damage, characterized by derangement of personality and loss of contact with reality and causing deterioration of normal social functioning. **Substance abuse:** The overindulgence in and dependence on an addictive substance, especially alcohol or a narcotic drug. **Tobacco:** Any of various plants of the genus *Nicotiana*, especially *N. tabacum*, native to tropical America and widely cultivated for their leaves, which are used primarily for smoking. **Posttraumatic stress disorder:** A psychological disorder affecting individuals who have experienced or witnessed profoundly traumatic events, such as torture, murder, rape, or wartime combat, characterized by recurrent flashbacks of the traumatic event, nightmares, irritability, anxiety, fatigue, forgetfulness, and social withdrawal. **Major depressive affective disorder, single episode:** A state of depression with all the classic symptoms (anhedonia and lethargy and sleep disturbance and despondency and morbid thoughts and feelings of worthlessness and sometimes attempted suicide) but with no known organic dysfunction.

Alcohol/Drug Abuse Or Dependence (894-897)

Diagnoses: that frequently accompanied Alcohol/Drug Abuse Or Dependence were: 1) Opioid type dependence, unspecified (30400), 2) Alcohol withdrawal (29181), 3) Insomnia, unspecified (78052), 4) Opioid type dependence, continuous (30401), 5) Other malaise and fatigue (78079), 6) Tobacco use disorder (3051), 7) Drug withdrawal (2920), 8) Major depressive affective disorder, single episode, unspecified (29620).

Definitions: **Opioid:** Any of a group of substances that resemble morphine in their physiological or pharmacological effects, especially in their pain-relieving properties. **Insomnia:** Chronic inability to fall asleep or remain asleep for an adequate length of time. **Malaise:** A vague feeling of bodily discomfort, as at the beginning of an illness. **Fatigue:** Physical or mental weariness resulting from exertion. **Tobacco:** Any of various plants of the genus *Nicotiana*, especially *N. tabacum*, native to tropical America and widely cultivated for their leaves, which are used primarily for smoking. **Major depressive affective disorder, single episode:** A state of depression with all the classic symptoms (anhedonia and lethargy and sleep disturbance and despondency and morbid thoughts and feelings of worthlessness and sometimes attempted suicide) but with no known organic dysfunction.

Rehabilitation With Complications (945)

Diagnoses: that frequently accompanied Rehabilitation With Complications were: 1) Atrial fibrillation (42731), 2) Chronic airway obstruction, not elsewhere classified (496), 3) Hyposmolality and/or hyponatremia (2761), 4) Esophageal reflux (53081), 5) Acute posthemorrhagic anemia (2851), 6) Depressive disorder, not elsewhere classified (311), 7) Coronary atherosclerosis of unspecified type of vessel, native or graft (41400), 8) Coronary atherosclerosis of native coronary artery (41401).

Definitions: **Atrial fibrillation:** Fibrillation of the muscles of the atria of the heart. **Fibrillation:** Muscular twitching involving individual muscle fibers acting without coordination. **Chronic airway obstruction:** COPD; A chronic lung disease, such as asthma or emphysema, in which breathing becomes slowed or forced. **Hyposmolality:** The condition especially of a bodily fluid of having abnormally low osmolality. **Hyponatremia:** A deficiency of sodium in the blood. **Esophageal reflux:** Reflux of stomach contents into the esophagus. **Reflux:** An abnormal backward flow of body fluids. **Acute posthemorrhagic anemia:** A condition in which a person quickly loses a large volume of circulating hemoglobin. **Depressive disorder:** A state of depression and anhedonia so severe as to require clinical intervention. **Coronary atherosclerosis:** A condition in which a person's arteries become clogged with cholesterol, calcium, and cellular waste.

Rehabilitation Without Complications (946)

Diagnoses: that frequently accompanied Rehabilitation Without Complications were: 1) Unspecified essential hypertension (4019), 2) Debility, unspecified (7993), 3) Anemia, unspecified (2859), 4) Other and unspecified hyperlipidemia (2724), 5) Abnormality of gait (7812), 6) Other myopathies (35989), 7) Unspecified acquired hypothyroidism (2449), 8) Diabetes mellitus without mention of complication, type II or unspecified type, not stated as controlled (25000).

Definitions: **Hypertension:** Elevated blood pressure persistently exceeding 140/90. Essential hypertension, the most common kind, has no single identifiable cause. **Debility:** The state of being weak or feeble; infirmity. **Anemia:** A pathological deficiency in the oxygen-carrying component of the blood, measured in unit volume concentrations of hemoglobin, red blood cell volume, or red blood cell number. **Hyperlipidemia:** An excess of fats or lipids in the blood. **Gait:** A particular way or manner of moving on foot. **Myopathy:** A disease of muscle or muscle tissue. **Hypothyroidism:** Insufficient production of thyroid hormones. **Diabetes mellitus:** A severe, chronic form of diabetes caused by insufficient production of insulin and resulting in abnormal metabolism of carbohydrates, fats, and proteins. The disease, which typically appears in childhood, or adolescence, is characterized by increased sugar levels in the blood and urine, excessive thirst, frequent urination, acidosis, and wasting.
