

To whom it may concern,

I am writing this letter to the P&T committee expressing my support for Nurtec ODT and the need for it to be preferred on Nevada State Medicaid's drug list.

I am an endocrinologist and I see a lot of patients, some of which suffer from migraine. The older medications are not good enough. It is time to evolve with new-age medications that are safe and effective. My patient population needs to be active and be able to return back to their normal lives.

I have had the opportunity to prescribe Nurtec ODT for many of my patients and I see how effective it is. My patients are getting back to work and living their best lives. Nurtec ODT works quickly with just one dose and I do not need to worry about titration.

Nurtec ODT has been extremely beneficial for my patients. They like the ODT delivery system and how quickly it works.

I see a lot of Medicaid patients in my clinic. This is a medication that would be helpful for my patients. Formulary and accessibility are very important to both them and myself.

Thank you,
