RE: annual review- Established Drug classes being reviewed. Due to the release of New Drug
psychotropic agents: Antipsychotics: Atypical Antipsychotics-oral Item 6d on Agenda June 24 2021 meeting

I have been informed of the upcoming annual review including atypical antipsychotics on the preferred drug list to
be reviewed June 24 2021 I request that Caplyta tablets be made available and acquire a preferred formulary status
for patients with Schizophrenia.

Having the ability to prescribe Caplyta first line rather than go through multiple trials and failures
of other generic medications that may have side effects profiles that could have negative impact on patients.
